3x Big Tech, 1x Startup 0→1 | Full-Stack (Java, C++, PostgreSQL) | Frontend (React, TypeScript)

WORK EXPERIENCE

Full-Stack Engineering Intern | Autodesk

Jan 2026 - May 2026

- Built **6+ end-to-end features** for Autodesk Fusion's library platform (4.6M+ users), spanning **backend database and services in Java/C++** and frontend UI in **React/TypeScript** and across multiple microservices to help users and engineering teams store, search, organize, and reuse shared materials, textures, components, and metadata.
- Improved **cross-service reliability by 30%** by leading a **API integration** initiative across **distributed system** establishing reusable standards with Pact contract-testing, writing **60+ automated tests** and documenting the testing architecture to further drive adoption across 6 other engineering teams.
- Built **DynamoDB and Redis-backed data workflows** implementing query patterns, refresh/invalidation logic, and caching to reduce redundant database access while improving metadata freshness and responsiveness across services.
- Fixed **reliability issues** across **distributed services and asynchronous message-broker workflows**, resolving concurrency, locking, and cross-service integration issues affecting long-running operations
- Collaborated across **4 repositories and 3 engineering teams in NA/Europe/India**, contributing to architecture reviews, PR feedback, API design, and system design in Miro/Confluence

Frontend Engineering Intern | Tesla

May 2025 - Aug 2025

- Built end-to-end features for **operator-facing ML factory software**, spanning frontend UI using **React and Typescript** and **data** interactions to support labeling, anomaly detection, and threat-visualization workflows
- Implemented **scalable video data infrastructure for ML inference results** from factory cameras, including API architecture, lazy loading, and custom bounding-box; **reduced time-to-insight ~40%** for operations teams
- Shipped React components to **design system** (validated forms, charts, data tables, filters, skeleton loaders) for **live factory monitoring workflows**, improving UI performance and responsiveness and **reducing page load time 20%** through pagination, memoization, and debounced inputs
- Implemented **unit tests and security-focused input validation**, sanitization, and state-integrity safeguards across frontend and API boundaries (forms, video controls, search) mitigating injection risks and reliability

Frontend Engineer Intern | Intuit

May 2024 - Aug 2024

- Built delightful, engaging UI experiences for TurboTax sign-up, focused on design craft, detail, responsiveness, & reducing user churn using **React, TypeScript, JavaScript, HTML, & CSS**
- Supported **A/B testing across onboarding experiences**, iterating on UI variations to cater to **user behavior**
- Increased user engagement 35% for Credit Karma × TurboTax's campaign by coding the digital experience
- Developed 10+ reusable UI components, 3 animations & 4 pages, including interactive cards, accordions, & banners

Full-Stack Engineer Intern | LaurelSpace

Sep 2023 - Dec 2023

- Developed CRM web and mobile hybrid software for Childcare Providers following **Agile Scrum** methodology
- Created **user authentication process** and implemented **database** for 3 user types with **PostgreSQL, Axios, and Django** including functionalities such as **data fetching, URL mapping, and session handling**
- Reduced 40% administrative efforts through integrating email automation system and Stripe Payment API

Solutions Engineer, ServiceNow | OMERS

May 2023 - Aug 2023

- Enhanced enterprise processes by 60-70% by designing UX, and programmed functionality of 8+ software and **automation** solutions including intake forms, email notifications, and process flows
- Conducted **QA sessions, requirements analysis and UAT sessions** with stakeholders and non-technical end users to understand user and business needs resulting in a **90% testing success rate** and 6+ features shipped

Developer and Data Analyst Intern | Metaverse Group

Nov 2022- May 2023

- Programmed a bot scraper with **Python and Selenium** for email outreach that increased B2B outreach by 500% generating 900+ email leads. Emails refined from 80% to 20% bounce-back rate and 54% open rate.

EDUCATION

University of Western- Honours Bachelor's, Dual Degree in Computer Science and Business

2022-2027
